

## Building a Leading Gold Mining Company in South America

Aris Mining operates two underground mines in Colombia, Segovia & Marmato, and is advancing two long-life development projects: Toroparu in Guyana and Soto Norte in Colombia. Executing our 'buy-and-build' strategy has created a portfolio that combines i) production and cash flow generation, ii) significant near-term growth to more than 500 koz/year of gold production from expanding Segovia and Marmato and iii) meaningful longer-term growth from developing Toroparu and Soto Norte, potentially unlocking 500 koz/year of additional gold production<sup>1</sup>.

Founded in 2022, Aris Mining has scaled to a point where our focus is now shifting from 'buy-and-build' to 'building'. With 100% ownership of Segovia, Marmato, Toroparu, and Soto Norte, Aris Mining is positioned to build a large, diversified gold producer. Fewer than 15 gold mining companies worldwide produce more than one million ounces of gold annually — and Aris Mining has the asset base and project development pipeline to join that group; as well as the balance sheet and team to fund and deliver that growth.

1. Includes potential production from Toroparu, which is based on a preliminary economic assessment and is preliminary in nature. It includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary economic assessment will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability. There can be no assurance that the projected production will be achieved. Such production also remains subject to obtaining all necessary permits for both Soto Norte and Toroparu.
